

ISLAND - INTEGRATED LIVING ENVIRONMENT

French Polynesia has 130 islands covering an area of 4,167 sq km, which include the islands of Tahiti, the Gambier Islands, the Marquesa Islands and the Society Islands.

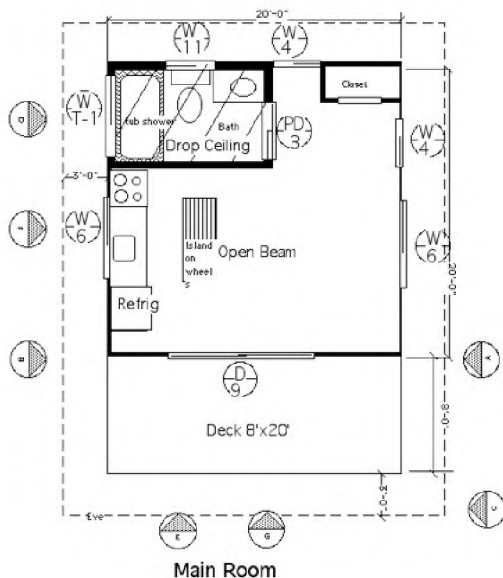

The Independent republic of Fiji has 332 islands covering 18,330 sq km.

Many of these islands are very small, accessible only by boat, without potable water, electric power, food or housing of any kind.

Some of these “undeveloped” islands are for sale. Development would make these islands much more valuable.

Our company provides plans and specifications to develop **INTEGRATED LIVING ENVIRONMENTS** in tune with the polynesian lifestyle.

Dwelling Plans

Potable Water

Photovoltaic (solar) and Battery Storage
Renewable Energy

Electric Boats and Autos

Hydroponic vegetable and fish tanks
